Ladders

F3 bespoke stainless steel handrail and balustrade systems can be used in office blocks, shopping and town centres, swimming pools and leisure centres etc.

Manufactured in stainless steel or galvanized mild steel, a wide range of options are available to designers and architects in terms of baluster profile and infill panels. Glass, mesh, perforated sheet, tension wire and tubular mid-rails are amongst the most popular. A choice of polished finishes is offered in brushed satin or mirror. All stainless steel systems are manufactured to comply with the relevant British Standards, BS3049, BS5395 Part III and BS6180. Stainless steel balustrades can be ordered on a supply only or supply and fix basis. On site the various sections can either be sleeve jointed and secured with tamper proof screws or welded together with the joints dressed and polished out.

Bespoke Products available on request.
